

13 Visit Protocol Outline

There are 12 specific themes or programs that best assist the patient in reducing inflammation, clearing cellular memory and balancing the body.

- The first 4 themes or programs work on basic fundamental aspects of the body, allowing for the immune system to receive optimal nutrients, and create a balanced environment for which the immune system, nervous system and endocrine system can communicate.
- Program 5-10 focus on primary triggers of inflammation.
- Program 11-12 focus on system balancing.
- Program 13 recaps all previous themes and makes any adjustments that may be necessary in order to optimize results.

Every program assesses and balances the Digestive System, Immune System, Endocrine System, Lymphatic System, Nervous System, and Organs, as well as Assessing and Balancing Emotions.

Specific Theses of the 13 Visit Program

Program A (1st)	Foods
Program B (2nd)	More foods, Amino Acids, Enzymes, Vitamins
Program C (3rd)	DNA / RNA, Artificial Sweeteners, Miasms
